Prompts & Requests You Made	1
---------------------------------------	---

Prompts & Requests You Made

1. Graph logic

- Asked if your cost logic was correct: if the algorithm returns `False`, then those nodes shouldn't be used in weight calculations.
- Asked whether to change the test or the algorithm (decided to rewrite for consistency).
- Asked if heuristics should be split into a separate file (`heuristics.py`).
- Requested a **full `heuristics.py` file**.
- Reported an error: `from core import heuristics as h` couldn't find the module → asked to update A* and Greedy algorithms to support **multiple heuristics**.
- Asked for updates to **all files** showing how and where to plug in heuristics for later extension.
- Asked if you were **missing any algorithms** and requested a list of potentially useful ones for the project.
- Asked for updates to your **log**.

2. Git / Branching

- Noted a pull request from `dev` → `main` had **merge conflicts**, and asked for a single command to force-push.
- Asked if `git push origin main --force` would work as a one-liner.
- Asked whether your **main branch** should serve as a stable backup while `dev` is your working branch.
- Created `github notes.md` and noted `git push origin dev` said "everything up to date."

3. Other project-related questions

- Asked whether the cost was "correctly implemented" (in tests).
- Checked consistency of algorithm/test return values.
- Wanted to confirm if **heuristics should be separated**.
- Wanted **block placeholders** to easily extend heuristics later.
